	The Grundfos MAGNA3 circulator pump is the ideal choice for almost any building project – old or new. With its unrivalled energy efficiency, all-encompassing range and built-in communication capabilities, MAGNA3 is ideal for engineers and specifiers looking to create high-performance heating and cooling systems. The pump is maintenance-free due to the canned-rotor type design. This also means that pump and motor form an				
	integral unit without shaft seal and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid.				
	MAGNA3 features an intuitive display and allows you to connect wirelessly with the Grundfos GO Remote app, giving you access to advanced reporting and monitoring.				
	The pump includes fieldbus communication via CIM mo relays.				
	Control features include AUTOADAPT and FLOWADAPT. FLOWADAPT which reduces the need for throttling valves, thus cutting costs on system components. MAGNA3 is the superior choice for a wide range of heating and cooling applications, including:				
	<ul> <li>Mixing loops</li> <li>Heating surfaces</li> <li>Air conditioning surfaces</li> <li>Ground-source heat pump systems</li> <li>Smaller chiller applications.</li> </ul>				
	MAGNA3 is a single-phase pump and characterised by control box. The pump also has a built-in differential-pre-
